

How to Identify Purple Loosestrife

(*Lythrum salicaria*)

USDA Forest Service Pacific Northwest Region
Invasive Plant EIS Team

Size:

- Can be anywhere from 4 to 8 feet tall at bloom time

Habit:

- Tall, erect perennial herb, very branched at the top of the stalk, with multiple densely flowered bloom spikes

Linda Wilson, University of Idaho,
www.forestryimages.org

Seed pods:

- Oval to round golden-brown capsules about 1/2 to 3/4" long, with pointed teeth
- Golden-brown seeds, the size of a grain of sand

Linda Haugen, USDA Forest Service,
www.forestryimages.org

Flowers:

- Peak bloom season late June to mid-July, but can be found in bloom as late as September
- Many bright purple-pink flowers in a long stalk at the top of the plant
- Six petals (may be 5 to 7), about 1" wide and 1/2" long
- Yellow flower centers
- Usually twice as many stamens as petals

How to Identify Purple Loosestrife Not in Bloom

Stems:

- Square, sometimes 5-angled, downy or fuzzy
- If you roll the stem between your fingers, you can feel the edges

Richard Bean, Maryland Department of Agriculture (3)

Leaves:

- Long, narrow with pointed tips, smooth edges and heart-shaped bases
- Joined directly to the plant stems, no leaf stalks
- Opposite, two across the stem from each other at each node; occasionally whorled, in groups of three at the same node
- Usually covered with soft, downy hairs, especially on the underside

Habitat:

- Areas of fresh to brackish water in moist or saturated soils; wet meadows, ditches, streambanks, marshes, floodplains in part to full sun

580 Taylor Avenue, Annapolis, Maryland 21401
